

ElderCraft[®] DualDefence

A new natural anti-viral system for lozenges

ElderCraft[®] DualDefense combines ElderCraft[®] European black elderberry extract with iota-carrageenan in a novel powder blend developed specifically for lozenges, oral sprays and chewables.

The two ingredients work through complementary anti-viral mechanisms, creating a synergistic effect demonstrated in anti-viral assays.

Tested against key respiratory viruses including:

- SARS-CoV-2
- Influenza A
- RSV

Even as a single-treatment without iota-carrageenan, ElderCraft[®] has shown significant results and exerts a clear direct antiviral, or virion-neutralising, effect against RSV. ElderCraft[®] significantly inhibited RSV replication. A patent application has been filed.

With this topical application, a low dose is sufficient to achieve an anti-viral effect for the duration of use.
